

ABSTRACT OF THE DISCLOSURE

**SUPPORT PANEL**

~~The present invention concerns an~~ An air permeable panel [[1]] for an intermediate cladding layer having filtering characteristics. Such cladding layers are for use in breathing buildings where the building walls provide filtering characteristics. The panel ~~comprises~~ includes a plurality of projections [[3]] interconnected in a lattice configuration, ~~said the~~ projections being arranged to face in a common direction for engagement in use with ~~said the~~ intermediate cladding layer. The projections [[3]] are formed from pointed hollowed elements, which are interspersed with apertures.
